# **Intended Use**

This Electric Suction Unit is intended for the removal of fluids from the airway or respiratory system. This appliance may also be used in the removal of infectious materials from patient wounds.

Utilizing a motor to drive an air pump to generate negative pressure (vacuum), this device will aspirate mucous secretions from the patient's body, in the management and treatment of respiratory diseases. Aspirated secretions are collected in the canister for proper disposal.

Caution: Federal law restricts this device to sale by or on the order of a physician

# Included

Machine AC Adapter and Power Cord Carrying Bag 800cc Suction Canister 1.5in Suction Tube Connector 10in Suction Tube Connector 6ft Suction Tubing Hydrophobic Inline Filter Air Filters (6)

# **Important Safeguards**

#### Note: Read all instructions carefully before use.

Warning: Modification of this equipment voids the Warranty.

No modification of this equipment is allowed. To avoid strangulation, keep children away from the power cord.

# Caution: Failure to read and observe all precautions could result in personal injury or equipment damage.

#### **Product Caution**

- To avoid electrical shock, keep the unit away from water; do not immerse the power cord or the unit in any liquid; do not use while bathing; do not reach for a unit that has fallen into water immediately unplug the unit.
- Never operate the unit if it has any damaged parts (including power cord), and/or if it has been dropped or submersed in water.
- The unit should not be used where flammable gas, oxygen or aerosol spray products are being used.
- Disconnect the unit from the electrical outlet before cleaning, filling and after each use.
- When in operation, ensure the power cable is accessible, but out of the way from accidental disconnection.
- Place the device near an outlet within reach of the patient on a flat and stable surface. Make sure that the ventilation slit on the side of the device is not blocked.

#### **Operating Caution**

- Connect this product to an appropriate voltage outlet for your model.
- Do not run this product unattended.
- If any abnormality occurs, discontinue use immediately until the unit has been examined and repaired.

#### **Storage Caution**

- Do not store the unit in direct sunlight, extreme temperature or humidity.
- Keep the unit out of reach of children.
- Keep the unit unplugged while storing.

#### **Cleaning Caution**

- Clean after each use as instructed in this guidebook.
- Do not immerse the unit in water. It may damage the unit.
- Disconnect the unit from the electrical outlet before cleaning.

# **Device Specifications**

AC 100-240V, 50-60Hz, 1.1A / DC 12 V

25 Lpm
800cc, 1,000cc, 1,200cc
13 ¾ x 6 ¼ x 8 ¼ in (340 x 160 x 220 mm)
5.29 lbs (2.4 kgs)
50°F to 104°F (10°C to 40°C), 30% to 75% Relative Humidity
-4°F to 140°F (-20°C to 60°C), 10% to 95% Relative Humidity
< 60 dBA at 1 meter

#### **TWO YEAR LIMITED WARRANTY**

This unit is warranted to be free from defective workmanship and materials for a period of two years from the date of purchase. Any defective part will be replaced or repaired at manufacturer's prudence. If proper care and maintenence of this unit is not followed as detailed within the operating manual, the warranty is subject to be terminated. If warranty repair is needed, please contact the place of purchase.

# **Power Indicators**

Power Status GREEN Device is in use RED Battery low

Battery Status GREEN The battery is fully charged GREEN Flashing The battery is charging

# **Operating Instructions**

#### Installing the filter

- Open the accessories bags and take out the two connector tubes and the filter.
- Connect one end of the short tube to the air input port and the other end to the filter.
- Connect the filter to the suction canister with the long connector tube.
- Inspect suction tubing and canister for leaks or cracks before each use.

#### Turn on the device

- To use the machine without battery power, plug in the power cord. To use with battery power, unplug the machine.
- Turn on the power switch.
- Connect the suction tube to the device, open the suction valve, and make sure airway is unobstructed.
- Adjust the negative pressure using the knob; choose the appropriate negative pressure for the appropriate physician-recommended treatment of the patient.

# Turn off the device

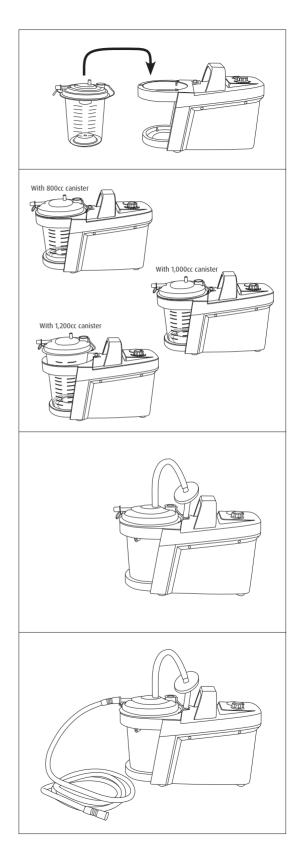

- After the treatment is over, turn off the power switch.
- The working cycle of the device is 30 minutes on and 30 minutes off.

# Battery charging

- If plugged in, the battery will start charging when device is turned off.
- Battery charge time is less than eight hours.
- Battery may be used for up to one hour when fully charged.

**Note:** If the device is connected with the power cord, the device will not draw power from the battery.

# Note: If battery is not regularly used, it is essential to charge it every 3 months to maintain battery functionality.

# Cleaning, Sterilization, and Disposal

- It is recommended that the tubing and canister be thoroughly cleaned with hot water after each use and be cleaned with a mild detergent after the last treatment of the day. If your physician or respiratory therapist specifies a different cleaning procedure, follow their instructions.
- The filter cannot be cleaned.
- If the filter gets wet, or becomes contaminated or clogged, it must be replaced.

#### Rinsing (after each treatment)

- Disconnect the tubes, canister and the filter cover. Rinse the tubes and canister with water.
- Dry them with a clean, soft towel or let air dry.
- Reassemble the product when completely dry and put in a clean, sealed container.

#### Disinfection

Please abide by the following steps to disinfect your suction device unless otherwise specified by a physician. It is suggested that the unit is disinfected after each treatment.

- Using one part white vinegar with three parts distilled water, make a bath to submerge the tubes and canister.
- Disconnect the tubes and canister from the machine and filter. Wash the tubes and canister in warm water and mild detergent. Then wash them in hot tap water.
- Submerge the tubes and canister in the vinegar and water solution bath for 30 minutes.
- Dry tubes and canister with clean soft towel or let air dry.
- Reassemble the product when completely dry and put in a clean, sealed container.

### Changing the air filter

Open the small circular hatch on the bottom of the unit counter-clockwise. Replace the BF018 foam air filter if it appears to be dirty, or after 3 months of use.

The device and accessories may come into contact with infectious material and be contaminated during their lifetime. For this reason, the device and its accessories should be decontaminated before disposal or transportation.

Dispose of the device properly at the end of its service life. According to the European Directives 2002/96 / EC (WEEE) and 2002/95 / EC (RoHS) the device may not be disposed of with unsorted domestic waste. Carefully separate materials. Consider local and country-specific laws and regulations that apply to the disposal of the device. The proper disposal prevents environmental damage and human harm.

Commercial bacterial germicides specifically intended for cleaning medical devices within the institutional envrionment may be used to clean this equipment, in compliance with the germicide manufacturer's recommended instructions.

# **Replaceable Parts and Accessories**

# Electromagnetic Compatibility (EMC) / Recommended Safe Distances

Medical equipment needs special precautions regarding electromagnetic compatibility (EMC). The device needs to be installed and put into service according to the EMC information provided in this chapter.

Portable and Mobile RF Communications Equipment can effect Medical Electrical Equipment. Use this table as a guide to help prevent electromagentic interference by maintaining a minimum distance between mobile RF Communications Equipment (transmitters) and the suction unit.

		ne manufacturer r all devices and	
		that it can also be use luct is used under the	d in a specific electromagnetic following conditions.
Emissionstest	Compliance	Electromagnetic En	vironment - Guidelines

distance D in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where P is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

Note 1: At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies. Note 2: These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects, and people.
